## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Group I, claims 1-24, in the reply filed on 08 November 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 25-49 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 08 November 2004.
3. This application contains claims directed to the following patentably distinct species of the claimed invention:
  - The species of using a chemical model to calculate the lubricity as embodied in claim 8.
  - The species of using one or more artificial neural networks to calculate the lubricity as embodied in claim 9.
  - The species of using one of a support vector machine, expert system, Bayesian belief network, fuzzy logic algorithm, and a data fusion engine to calculate the lubricity as embodied in claim 10.

The species of utilizing a multi-element sensor comprising a three-electrode electro-chemical sensor as embodied in claim 13.

The species of altering an electro-static field in the vicinity of the multi-element sensor as embodied in claim 14.

The species of utilizing a multi-element sensor having a plurality of finger-like elements, wherein the spacing between three or more finger-like elements is different as embodied in claim 15.

The species of utilizing a multi-element sensor having a plurality of finger-like elements, whereby two or more fingers-like elements have different surface coatings as embodied in claim 16.

The species of utilizing a multi-element sensor having two surfaces that generate frictional forces between the two surfaces as embodied in claim 17.

The species of utilizing a multi-element sensor having two surfaces that generate frictional forces between the two surfaces, wherein at least one of the two surfaces comprises an insulating layer as embodied in claims 17 and 18.

The species of utilizing a multi-element sensor having two surfaces that generate frictional forces between the two surfaces, wherein at least one of the two surfaces comprises a layer of material that readily wears as embodied in claims 17 and 19.

The species of utilizing a multi-element sensor comprising a rotating disk and a surface that tangentially contacts the rotating disk as embodied in claim 20.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-7, 11, 12, and 21-24 are generic.

NOTE: Applicant is required to pick ONE species from the processing claims, claims 8, 9, or 10, and ONE species from the multi-element claims, claims 13-20.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 2856

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
